Ophthalmology

Pulmonary Coding Tip

If a definitive diagnosis has not been established to the end of the encounter, it is appropriate to report specific (and/or category) in lieu of a definitive diagnosis. When sufficient clinical information is not shown or available about a particular health condition to assign a more specific code, the appropriate "unspecified" code (eg, a diagnosis of pneumonia has been determined, but not the specific type). Unspecified codes should be reported when they are the code that most accurately reflects what is known about the patient's condition at the time of that particular encounter.

The release of the -10 digit symbol indicates that an additional digit is needed. For example, **Cause** becomes C 10.0.
